TACTICAL PROTECTION

EKA CAMLOCK® Baton

The Bonowi EKA Baton, an exceptionally-engineered product based on Bonowi's 30 years of experience in the global public safety market. In light of the sharp increase in violent attacks, the EKA Baton has proven its fit as an reliable non lethal product in any situation. Operational practice has shown that 75 percent of all aggressive acts can be stopped merely by presenting the EKA CAMLOCK Baton. All without actually using the EKA against the subject involved.

Practical Deployment

The baton can be expanded with a moderate swing of the wrist or by simply pulling its tip. It is retracted by pushing the baton sections together again after pressing the release button on the rear end of the handle. The impact energy is absorbed by the rubber trimmed handle and by slide rings at the transition between the baton sections. The slide rings also enable a quiet expansion and retraction of the baton without any metallic scraping noise, rattling, or bounce-back effect.

About the EKA

- Available in 4 sizes (16in, 21in, 24in, 26in).
- Available in hardened steel, or light weight aircraft aluminum.
