

STOP STICK®

EKA Training Pad

Baton Training Pad

The **EKA Training Pad** is specially developed for training with the **EKA CAMLOCK® Baton**.

Designed to be used for a wide range of training scenarios, the **EKA Training Pad** features a curved shape for protection from blows to peripheral areas, superior impact dampening, multiple support handles for comfort and added stability for the wearer.

A Better Designed Training Pad

Traditional training pads have a flat strike face making training with a baton less effective. The **EKA Training Pad** is designed so that the person delivering a blow can accurately differentiate the location of large muscle groups.

With an integrated polycarbonate plate and curved design, the **EKA Training Pad** protects the user from all strikes, dispersing the impacts so the user does not feel blows through the pad. As a result, the person striking the pad can be more confident in their actions without fear of hurting the person holding it.

Classroom Tested & Proven.

Class room tested and proven, the **EKA Training Pad** stands up to some of the most rigorous classroom exercises and still maintains its shape and rigidity, with minimal signs of wear.

The **EKA Training Pad** is much better suited for classroom training exercises when compared to traditional strike pads. The **EKA Training Pad** provides a larger protected area, and allowing for more mobility for the person wearing it, no matter how large or small the stature of the person holding it.

Designed with a replaceable strike face the pad can be easily made to look new by simply removing the strike face and replacing it with a new one using the Velcro attached to the strike
